

planet Earth. Some resources are not renewable, as in this “day and age” is, so when we all realize how much we have damaged our planet probably it will be too late to fix it. Besides producing energy, wind turbines can also pump water and clean it. Another opportunity that wind mills offer us is by creating more jobs through increasing the number of wind mills. Think about it, if there are more wind mills to build, then there are more job opportunities, especially the way that our economy is nowadays, more job opportunities could really help us out. What a cool way to save money from our pockets and help our planet to be healthy.

I know this all sounds great but unfortunately there are some disadvantages too. In our city there is not always wind, and without wind the wind turbines do not work. So, if there is no wind there is no electricity and nowadays no electricity means no TV, radio, PCs, microwaves, all the amenities and features that our 21<sup>st</sup> century offer us and most of all we depend on. Another disadvantage is that these machines are not silent. Even though wind turbines are loud and they will not interfere with our daily living activities; Wind turbines can impact animals and plants depending on the sensitivity of the area, and it is one of the reasons why wind turbines are located in open areas. Even if we can save our environment by using a wind turbine there are still some risks, like disrupting the ecosystems, like wetlands because of their sensitivity. However and without a doubt wind turbines are “greener” alternatives than burning fossil fuels or nuclear generation.
