

How to read the [break board](#).

DATE	Time	SO #	ADDRESS or LOCATION	AP	DT	SPVR	CREW
3/16/04	14:50	858414	22800 E 56 St N	731	17:30	463	495

DATE: This is the month/day the problem was called into the dispatch office.

TIME: Is the time that problem was called into the dispatch office

ADDRESS or LOCATION: This is the specific street address, or best street location or intersection where the problem is located.

AP: Atlas page. This is the page in the City of Tulsa water atlas where the problem is located.

DT: Dig Time. This is the time the field crew uses to start digging. This time is usually 2 hours after an emergency locate is called in to Call Okie.

SPVR: Mainline supervisor the break or other problem has been given to.

CREW: This is the crew number the field supervisor assigns the break to.

BREAKS & BAD LEAKS	ONG	PSO	COX	MCI	ATT	Sprin ↑	SBC	Okie # (last 4)
24"BRK		cl						1666

BREAKS & LEAKS: This is the type of problem. Usually the line or hydrant size, whether the line is broken or badly leaking OR if the hydrant is inoperable or has been knocked over. When possible the area of the problem will be listed as well whether it be in the parking, the street, the curb, the sidewalk or wherever.

ONG/PSO/COX: These are our 8 most common locators who may or may not have underground facilities near water main lines. We keep close track of these 8 utility providers and mark "CL" if they call in clear, "FL" if they have flagged their lines, or WD (watchdog) if they wish to be present when we excavate.

OKIE#: This is the last four digits of the number Call Okie gives to track the locate information. This is placed on the board to make it easier to see where information should go when a locator calls it in.
