8. **No Indemnification by City.** Seller understands and acknowledges that City is a municipal corporation that is funded by its taxpayers to operate for the benefit of its citizens. Accordingly, and pursuant to Oklahoma law, City shall not indemnify nor hold Seller harmless for loss, damage, expense or liability arising from or related to this Agreement, including any attorneys' fees and costs. In addition, Seller shall not limit its liability to City for actual loss or direct damages for any claim based on a material breach of this Agreement and the documents incorporated herein. City reserves the right to pursue all legal and equitable remedies to which it may be entitled.
9. **Indemnification by Seller.** Seller agrees to indemnify, defend, and save harmless City and its officers, employees and agents from all suits and actions of any nature brought against them due to the use of patented appliances, products or processes provided by Seller hereunder. Seller shall pay all royalties and charges incident to such patents.
10. **No Insurance by City.** If City is leasing Goods herein, City shall not be required to obtain insurance for Seller's property. Seller shall be solely responsible for any insurance it deems necessary. City is self-insured for its own negligence, subject to the limits of the Governmental Tort Claims Act (51 O.S. § 151 et seq.).
11. **No Confidentiality.** Seller understands and acknowledges that City is subject to the Oklahoma Open Records Act (51 O.S. §24A.1 et seq.) and therefore cannot assure the confidentiality of contract terms or other information provided by Seller pursuant to this Agreement that would be inconsistent with City's compliance with its statutory requirements thereunder.

Furthermore, if City accepts Seller's Bid and awards a contract to Seller based on such Bid, City shall not be bound to any exceptions, changes or additions made by Seller, and any terms and conditions added by Seller which are not expressly agreed to by City in writing will be void and of no force and effect and the parties will be governed according to the document precedence set forth in Section 1 above.
13. **Compliance with Laws.** Seller shall be responsible for complying with all applicable federal, state and local laws, regulations and standards. Sec. 1312 and includes but is not limited to the free Employee Verification Program (E-Verify) available at www.dhs.gov/E-Verify.
14. **Termination.** City, by written notice, may terminate this Agreement, in whole or in part, when such action is in the best interest of City. If this Agreement is so terminated, City shall be liable only for payment for Goods accepted and Services rendered prior to the effective date of termination. City's right to terminate this Agreement is cumulative to any other rights and remedies provided by law or by this Agreement.
15. **Price Changes.** The parties understand and agree that the variables in Seller's cost of performance may fluctuate, but any change in Seller's cost of performance will not alter its obligations under this Agreement, nor excuse performance or delay on Seller's part. If the IFB provides that Seller may include a price escalation provision in its Bid, Seller's price escalation provision will be evaluated by City as part of Seller's Bid price when awarding the Bid.
16. **Right to Audit.** The parties agree that Seller's books, records, documents, accounting procedures, practices, price lists or any other items related to the Goods and/or Services provided hereunder are subject to inspection, examination, and copying by City or its designees. Seller is required to retain all records related to this Agreement for the duration of the term of this Agreement and a period of three years following completion and/or termination of the Agreement. If an audit, litigation or other action involving such records begins before the end of the three year period, the records shall be maintained for three years after the date that all issues arising out of the action are resolved or until the end of the three year retention period, whichever is later.
17. **Notice.** Any notice, demand, or request required by or made pursuant to this Agreement shall be deemed properly made if personally delivered in writing or deposited in the United States mail, postage prepaid, to the addresses specified below.

PROJECT SCOPE

One of the three bulk sodium hydroxide storage tanks at the Mohawk WTP is in need of repair. The interior liner has failed with severe chemical etching, exposing the shell and bottom of the tank to the sodium hydroxide. Additionally, the manway and flanges have severe chemical damage and need to be replaced.

Work performed under this project shall include: the removal and replacement of all flanged nozzles at the base of the tank and the manway, and the removal and replacement of the interior corrosion barrier layers on the vessel sidewall and bottom. All work performed shall be documented and submitted to the City of Tulsa for approval upon completion of the project.

Materials to be utilized in the repair of the fiberglass tank under this project shall have the following characteristics:

- Resin System
 - The resin utilized shall be Hetron 922, manufactured by Ashland Chemical
 - The cure system shall be CO/NAP-MEKP.
 - Resin substitutions or resin blends are prohibited.
 - The addition of pigments, dyes, resin extenders or fillers is prohibited.
 - Thixotropic agents for viscosity control are allowed.
 - Thixotropic agents must not interfere with visual inspection.
 - The added quantity of thixotropic agent shall not exceed 5% by weight. If a higher quantity is proposed for use, the Seller must supply the owner with written verification from the resin manufacturer that the proposed quantity will not alter the resin's corrosion resistance.
- Chopped Strand Mat
 - Chopped strand mat utilized shall be Type ECR
 - Chopped strand mat utilized shall be 1.5oz/ft².
 - Mechanically applied chopped glass is prohibited.
- Woven Roving
 - Woven Roving utilized shall be Type ECR
 - Woven Roving shall be 24 oz/yd².
- Surfacing Veil
 - The surfacing veil utilized shall be Nexus, manufactured by Precision Fabrics Group, Inc.

Quality Assurance

- The Seller shall document the lot on batch numbers of all materials utilized.
- The Seller shall document the application of reinforcement layers to ensure that the finished thickness of the laminate is correct.

- The visual acceptance criteria for all applied laminate shall be as specified in ASME RTP-1, Table 61, Level 2. The maximum density of classifiable air bubbles shall be 5 per in² square inch.
- Laminate cure shall be determined by means of Barcol hardness. Hardness readings shall be taken on the vessel sidewall and bottom separately.
- A total of twelve hardness readings shall be taken on each of the surface areas, widely distributed such that the readings will be representative of the overall laminate cure.
- Curing should be accomplished by means of an explosion-proof heater at 150 °F for 6-8 hours.
- The highest and lowest reading will be discarded, and the ten remaining readings will be averaged. The minimum average Barcol hardness value shall be 26.
- If any average Barcol hardness value falls below the specified minimum, a condition of nonconformance shall exist.
- In addition to Barcol hardness, acetone sensitivity tests shall be conducted on each of the repaired surfaces in accordance with ASME RTP-1, 6-910(b)(7).
- If any surfaces are found to be acetone sensitive, a condition of nonconformance shall exist.
- Upon completion of all specified repairs, the vessel shall be subjected to a hydrostatic leak test to verify work integrity.
- The vessel shall be filled with water to the top of the sidewall.
- As is standard, the hydrostatic test duration shall be a minimum of two (2) hours.

Execution

This section of the Technical Specifications is included as a general guideline for the performance of the work involved. It does not take the place of the practices detailed in ASME RTP-1.

- Preliminary Exploration
 - Before proceeding with the repair, the Seller shall remove the existing corrosion barrier from several small areas on the vessel sidewall and bottom to determine the depth of laminate degradation. The joint area base of the sidewall shall be included in the preliminary exploration.
 - Barrier removal shall be accomplished using a handheld grinder with an 80 grit sanding disk. Extreme care shall be taken to avoid grinding into the underlying structural layer.
 - If it is determined that the structural layers are compromised due to chemical attack or permeation, the owner is to be notified before proceeding with tank repair. At this point, the feasibility of tank repair must be reevaluated.
- Corrosion Barrier Restoration
 - Existing Corrosion Barrier Removal
 - Remove the existing corrosion barrier by grinding as detailed in ASME RTP-1, M7-600.
 - When complete, there should be no compromised laminate left on the vessel wall or bottom.
 - The Seller shall perform at least one (1) laminate peel test on each of the surfaces to determine the substrate's ability to receive new laminate. The results of the peel tests shall be documented.
 - Surface Preparation
 - After the corrosion barrier has been removed, all grinding dust and debris shall be removed completely.

- All surfaces that will be receiving new laminate shall be thoroughly cleaned as indicated in ASME RTP-1, M7624(c)(2).
- A primer layer consisting of one (1) layer of 1.5 oz/ft² chopped strand mat saturated with Hetron 922 shall be applied to enhance subsequent bonding. The primer layer shall be allowed to cure before applying the first ply of new corrosion barrier laminate.
- **New Corrosion Barrier Application**
 - The primer layer shall be brush-ground prior to the application of new corrosion barrier laminate.
 - Laminate plies forming the reconstructed corrosion barrier shall be applied in accordance with standard practice, outlined in RTP-1, M7-624.
 - Care shall be taken to ensure that surfaces of concern receive the equivalent of two layers of 1.5 oz/ft² chopped strand mat and two layers of Nexus surfacing veil.
 - Application of laminate shall be documented for future reference.
 - When all specified restoration layers have been applied and cured, the corrosion barrier shall be finished in accordance with M7-624(e).
- **Manway Replacement**
 - **Manway Removal**
 - The damaged manway shall be removed without enlarging the shell opening.
 - **Surface Preparation**
 - The Seller shall prepare the exterior and interior surfaces surrounding the shell opening in accordance with ASME RTP-1, 4-320(a).
 - All surfaces receiving new laminate shall be thoroughly cleaned as indicated in ASME RTP-1, M7624(c)(2).
 - A primer layer consisting of one layer of 1.5oz/ft² chopped strand mat saturated with Hetron 922 shall be applied to enhance subsequent bonding. The primer layer shall be allowed to cure before applying the first ply of new installation laminates.
 - **Manway Replacement**
 - If the shell opening is larger than the outside diameter of the replacement manway, the manway shall be built up to fit with the chopped strand mat laminate. The replacement manway shall be a snug fit in the shell opening. Resin paste shall not be used to fill excessive gaps.
- **Flanged Nozzle Replacement**
 - **Flanged Nozzle Removal**
 - The defective nozzle shall be removed without removing the shell cutout reinforcement which surrounds the nozzle or enlarging the shell opening.
 - **Surface Preparation**
 - The Seller shall prepare the exterior and interior surfaces surrounding the shell opening in accordance with ASME RTP-1, 4-320(a).
 - All surfaces that will be receiving new laminate shall be thoroughly cleaned as indicated in ASME RTP-1, M7624(c)(2).
 - A primer layer consisting of one layer of 1.5 oz/ft² chopped strand mat saturated with Hetron 922 shall be applied to enhance subsequent bonding. The primer

layer shall be allowed to cure before applying the first ply of new installation laminates.

- Flanged Nozzle Replacement
 - Replacement flanged nozzles shall be fabricated in accordance with ASME RTP-1, 4-400.
 - If the shell opening is larger than the outside diameter of the replacement flanged nozzle, the nozzle shall be built up to fit with the chopped strand mat laminate. The replacement nozzle shall be a snug fit in the shell opening. Resin paste shall not be used to fill excessive gaps.
 - The Seller shall correctly position the replacement flanged nozzle to accommodate appropriate flange alignment, projection, and bolt hole rotation. Once the position is correct, the flange shall be secured with catalyzed resin paste and allowed to cure.
 - The bonding of the replacement flanged nozzle shall proceed in accordance with SAME RTP-1, 4-430.
 - Installation shall be Style A as illustrated in ASEM RTP-1, Figure 4-4.
 - The outside installation bond thickness (t_o) shall be 0.27 inch. The reinforcement sequence is indicated by the notation MRMRMRM, where M denotes a layer of chopped strand mat and R denotes a layer of woven roving. The outside shear bond length (h_o) shall be 3 inches.
 - The inside installation bond thickness (t_i) shall be 0.15 inch. The reinforcement sequence is indicated by the notation MMMNN, where M denotes a layer of chopped strand mat and N denotes a layer of Nexus surfacing veil. The inside shear bond length (h_i) shall be 3 inches.
 - The replacement nozzles shall be reinforced with four plate-type gussets.

City of Tulsa staff shall clean out the content of the fiberglass tank prior to work performed by the Seller.
