To establish contracted services for the Repair of a Fiberglass Bulk Chemical Storage Tank at the Mohawk Water Treatment Plant, located at 3600 E. Mohawk Blvd., Tulsa, Oklahoma, 74115.

Delivery Requirements

All prices quoted shall be based on delivery F.O.B. Tulsa, Oklahoma or to any other points as may be designated in the Specifications, with all charges prepaid by Seller to the actual point of delivery. Bids must state the number of Days required for delivery under normal conditions.

Absolutely no items over 500lbs. may be directly shipped to the City requiring the City personnel to unload from the shipping truck or trailer. The City carries no responsibility for any damages incurred during an unloading occurrence. All unloading shall be the responsibility of the Seller and/or shipping entity.

Additional Supply-Specific Delivery Requirements

Seller is responsible for delivery of all materials and labor required for the work spelled out in this IFB.

2. Specifications

One of the three bulk sodium hydroxide storage tanks at the Mohawk WTP is in need of repair. The interior liner has failed with severe chemical etching, exposing the shell and bottom of the tank to the sodium hydroxide. Additionally, the manway and flanges have severe chemical damage and need to be replaced.

Work performed under this project shall include: the removal and replacement of all flanged nozzles at the base of the tank and the manway, and the removal and replacement of the interior corrosion barrier layers on the vessel sidewall and bottom.

Materials to be utilized in the repair of the 14'diameter, 16' tall, flat bottom fiberglass tank under this project shall include the following:

- Resin System
 - The resin utilized shall be Hetron 922, manufactured by Ashland Chemical, or an approved equivalent. If alternative to Hetron 922 is to be used, Seller shall provide specifications of the alternate product with its bid.
 - The cure system shall be CO/NAP-MEKP.
 - Resin blends are prohibited.
 - The addition of pigments, dyes, resin extenders or fillers is prohibited.
 - Thixotropic agents for viscosity control are allowed.
 - Thixotropic agents must not interfere with visual inspection.
 - The added quantity of thixotropic agent shall not exceed 5% by weight without prior approval from the City. If a higher quantity is proposed for use, the Seller must supply the City with written verification from the resin manufacturer that the proposed quantity will not alter the resin's corrosion resistance.
- Chopped Strand Mat
 - Chopped strand mat utilized shall be Type ECR
 - Chopped strand mat utilized shall be 1.5oz/ft².
 - Mechanically applied chopped glass is prohibited.
- Woven Roving

- Woven Roving utilized shall be Type ECR
- Woven Roving shall be 24 oz/yd².
- Surfacing Veil
 - The surfacing veil utilized shall be Nexus, manufactured by Precision Fabrics Group, Inc.

Quality Assurance

- The Seller shall document the lot on batch numbers of all materials utilized.
- The Seller shall document the application of reinforcement layers to ensure that the finished thickness of the laminate is correct.
- The visual acceptance criteria for all applied laminate shall be as specified in ASME RTP-1, Table 61, Level 2. The maximum density of classifiable air bubbles shall be 5 per in² (square inch).
- Laminate cure shall be determined by means of Barcol hardness. Hardness readings shall be taken on the vessel sidewall and bottom separately.
- A total of twelve hardness readings shall be taken on each of the surface areas, widely distributed such that the readings will be representative of the overall laminate cure.
- Curing should be accomplished by means of an explosion-proof heater at 150 °F for 6-8 hours.
- The highest and lowest reading will be discarded, and the ten remaining readings will be averaged. The minimum average Barcol hardness value shall be 26.
- If any average Barcol hardness value falls below the specified minimum, a condition of nonconformance shall exist.
- In addition to Barcol hardness, acetone sensitivity tests shall be conducted on each of the repaired surfaces in accordance with ASME RTP-1, 6-910(b)(7).
- If any surfaces are found to be acetone sensitive, a condition of nonconformance shall exist.
- Upon completion of all specified repairs, the vessel shall be subjected to a hydrostatic leak test to verify work integrity.
- The vessel shall be filled with water to the top of the sidewall.
- As is standard, the hydrostatic test duration shall be a minimum of two (2) hours.

Execution

This section of the Specifications is included as a general guideline for the performance of the work involved. It does not take the place of the practices detailed in ASME RTP-1. The tank is classified as a confined space and must be treated as such. All Occupational Safety and Health Administration (OSHA) standards regarding confined spaces must be followed while performing this work. Seller must provide their own confined space entry equipment for employee use. Note that any exhaust from blowers or other equipment must be diverted outside of the building. Exhaust should be filtered or ventilated in such a manner that fumes, dust, fiberglass, or other particulates do not enter the atmosphere.

- Preliminary Exploration
 - Before proceeding with the repair, the Seller shall remove the existing corrosion barrier from several small areas on the vessel sidewall and bottom to determine the depth of laminate degradation. The joint area base of the sidewall shall be included in the preliminary exploration.
 - Barrier removal shall be accomplished using a handheld grinder with an 80 grit sanding disk. Extreme care shall be taken to avoid grinding into the underlying structural layer.

- If it is determined that the structural layers are compromised due to chemical attack or permeation, the City is to be notified before proceeding with tank repair. At this point, the feasibility of tank repair must be evaluated.
- Corrosion Barrier Restoration
 - Existing Corrosion Barrier Removal
 - Remove the existing corrosion barrier by grinding as detailed in ASME RTP-1, M7-600.
 - When complete, there should be no compromised laminate left on the vessel wall or bottom.
 - The Seller shall perform at least one (1) laminate peel test on each of the surfaces to determine the substrate's ability to receive new laminate. The results of the peel tests shall be documented.
 - Surface Preparation
 - After the corrosion barrier has been removed, all grinding dust and debris shall be removed completely.
 - All surfaces that will be receiving new laminate shall be thoroughly cleaned as indicated in ASME RTP-1, M7-624(c)(2).
 - A primer layer consisting of one (1) layer of 1.5 oz/ft² chopped strand mat saturated with Hetron 922, or approved equivalent, shall be applied to enhance subsequent bonding. The primer layer shall be allowed to cure before applying the first ply of new corrosion barrier laminate.
 - New Corrosion Barrier Application
 - The primer layer shall be brush-ground prior to the application of new corrosion barrier laminate.
 - Laminate plies forming the reconstructed corrosion barrier shall be applied in accordance with standard practice, outlined in ASME RTP-1, M7-624.
 - Care shall be taken to ensure that surfaces of concern receive the equivalent of two layers of 1.5 oz/ft² chopped strand mat and two layers of Nexus surfacing veil.
 - Application of laminate shall be documented for future reference.
 - When all specified restoration layers have been applied and cured, the corrosion barrier shall be finished in accordance with M7-624(e).
- Manway Replacement
 - Manway Removal
 - The damaged manway shall be removed without enlarging the shell opening.
 - Surface Preparation
 - The Seller shall prepare the exterior and interior surfaces surrounding the shell opening in accordance with ASME RTP-1, 4-320(a).
 - All surfaces receiving new laminate shall be thoroughly cleaned as indicated in ASME RTP-1, M7624(c)(2).
 - A primer layer consisting of one layer of 1.5oz/ft² chopped strand mat saturated with Hetron 922, or approved equivalent, shall be applied to enhance subsequent bonding. The primer layer shall be allowed to cure before applying the first ply of new installation laminates.
 - Manway Replacement
 - If the shell opening is larger than the outside diameter of the replacement manway, the manway shall be built up to fit with the chopped strand mat laminate. The replacement manway shall be a snug fit in the shell opening. Resin paste shall not be used to fill excessive gaps.
- Flanged Nozzle Replacement
 - Flanged Nozzle Removal

- The defective nozzle shall be removed without removing the shell cutout reinforcement which surrounds the nozzle or enlarging the shell opening.
- Surface Preparation
 - The Seller shall prepare the exterior and interior surfaces surrounding the shell opening in accordance with ASME RTP-1, 4-320(a).
 - All surfaces that will be receiving new laminate shall be thoroughly cleaned as indicated in ASME RTP-1, M7624(c)(2).
 - A primer layer consisting of one layer of 1.5 oz/ft² chopped strand mat saturated with Hetron 922, or approved equivalent, shall be applied to enhance subsequent bonding. The primer layer shall be allowed to cure before applying the first ply of new installation laminates.
- Flanged Nozzle Replacement
 - Replacement flanged nozzles shall be fabricated in accordance with ASME RTP-1, 4-400.
 - If the shell opening is larger than the outside diameter of the replacement flanged nozzle, the nozzle shall be built up to fit with the chopped strand mat laminate. The replacement nozzle shall be a snug fit in the shell opening. Resin paste shall not be used to fill excessive gaps.
 - The Seller shall correctly position the replacement flanged nozzle to accommodate appropriate flange alignment, projection, and bolt hole rotation. Once the position is correct, the flange shall be secured with catalyzed resin paste and allowed to cure.
 - The bonding of the replacement flanged nozzle shall proceed in accordance with ASME RTP-1, 4-430.
 - Installation shall be Style A as illustrated in ASME RTP-1, Figure 4-4.
 - The outside installation bond thickness (t_o) shall be 0.27 inch. The reinforcement sequence is indicated by the notation MRMRMRM, where M denotes a layer of chopped strand mat and R denotes a layer of woven roving. The outside shear bond length (h_o) shall be 3 inches.
 - The inside installation bond thickness (t_i) shall be 0.15 inch. The reinforcement sequence is indicated by the notation MMMNN, where M denotes a layer of chopped strand mat and N denotes a layer of Nexus surfacing veil. The inside shear bond length (h_i) shall be 3 inches.

Agreement up to an additional four (4) one (1) year term(s). Seller understands and acknowledges that any future contracts or renewals are neither automatic nor implied by this Agreement. City's continuing purchase of the Supplies and/or Services set forth in this Agreement is subject to City's needs and to City's annual appropriation of sufficient funds in City's fiscal year (July 1st to June 30th) in which City purchases Supplies and/or Services. In the event City does not appropriate or budget sufficient funds to perform this Agreement, this Agreement is null and void without further action by City.

5. **Supplies Warranty.** With respect to all Supplies to be delivered under this Agreement, Seller warrants to City that such Supplies will be of good materials and workmanship and free from defects and will conform to the Specifications provided by City. If the failure is with a Supply, then Seller shall promptly correct, repair or replace such Supplies at its sole expense and/or if the failure is with a Service, then Seller shall promptly reperform such Service at Seller's sole expense. Notwithstanding the foregoing, if City determines that such Supplies and/or Services are defective or non-conforming within the first thirty (30) Days after the date of Acceptance by City, then Seller at City's option shall refund the entire purchase price, and, in the case of Supplies, City shall promptly return such Supplies to Seller. Seller shall pay all expenses related to the return of such Supplies to Seller.
9. **Seller Bears Risk.** Seller shall bear the risk of loss or damage at all times until the Acceptance of the Supplies or Services by City.
10. **No Indemnification by City.** Seller understands and acknowledges that City is a municipal corporation that is funded by its taxpayers to operate for the benefit of its citizens. Accordingly, and pursuant to Oklahoma law, City shall not indemnify nor hold Seller harmless for loss, damage, expense or liability arising from or related to this Agreement, including any attorneys' fees and costs. In addition, Seller shall not limit its liability to City for actual loss or direct damages for any claim based on a material breach of this Agreement. City reserves the right to pursue all legal and equitable remedies to which it may be entitled.

Seller must exercise all reasonable and customary precautions to prevent any harm or loss to all persons and property related to the Agreement. If City terminates this Agreement, City shall be liable only for payment for Supplies accepted and Services rendered prior to the effective date of termination. City's right to terminate this Agreement is cumulative to any other rights and remedies provided by law or by this Agreement.
17. **Price Changes.** The parties understand and agree that the variables in Seller's cost of performance may fluctuate, but any change in Seller's cost of performance will not alter its obligations under this Agreement, nor excuse performance or delay on Seller's part. If the IFB provides that Seller may include a price escalation provision in its Bid, Seller's price escalation provision will be evaluated by City as part of Seller's Bid price when awarding the Bid.
18. **Right to Audit.** Seller agrees that Seller's books, records, documents, accounting procedures, practices, price lists or any other items related to the Supplies and/or Services provided hereunder are subject to inspection, examination, and copying by City or its designees.
